

QSC Offers "Q-Kushion™" Shock Absorber

Quality Steel has announced the release of a small improvement in our tanks that will reap major benefits to the propane dealer.

"Q-Kushion™" is designed to keep the bottom edge of the dome from scratching or chipping the paint on the top of the tank.

"Q-Kushion™" is a combination shock absorber and spacer.

"Q-Kushion™" is made of neoprene rubber.

"Q-Kushion™" is shaped like a "Q" and simply slips over the locking tab.

"Q-Kushion™" will protect the paint finish for years to come.

This small improvement will help you maintain your tanks once they are in the field, and hopefully reducing maintenance costs over the long haul. It is just another example of the effort we are making to ensure that our customers get a product that they are pleased with. We are excited about this improvement and hope you will be as well.

"Q-Kushion™" is available in quantities if you wish to retrofit your older tanks. Just give us a call for pricing and availability.
